Prevention of Mosquito Breeding

As the hot and humid weather is conducive to the breeding of mosquitoes, we have to strengthen anti-mosquito measures and be alert to the risks of mosquito-borne diseases such as dengue fever and Japanese encephalitis. Therefore, in addition to our routine pest control, we have installed mosquito trap devices at different locations of the estate in order to prevent the mosquito breeding especially for Aedes albopictus.

Locations of the mosquito trap devices: **(*Please do not touch the Pesticides*)**
